

A simple WPF Application

window or page. You can use the same controls in both stand-alone applications and browser-based applications.

The following XAML code example shows how to create a TextBox control and a Button control that are similar to the controls that are illustrated in the image:

```
<Grid>
    <TextBox Name="TextBox1" />
    <Button Name="Button1">Click
here</Button>
</Grid>
```

You can also define controls explicitly by using XAML or imperative code

WPF includes a library of common UI components
