

```

44     @Override
45     protected String doInBackground(String... statuses){
46         try{
47             Twitter.Status status=twitter.updateStatus(statuses[0]);
48             return status.text;
49         }catch (TwitterException e){
50             Log.e(TAG, e.toString());
51             e.printStackTrace();
52             return "Failed to post";}}
53 //Call when there is a status to update
54     @Override
55     protectedvoid onProgressUpdate(Integer... values){
56         super.onProgressUpdate();}
57 //Call upon completion of Background activity
58     @Override
59     protectedvoid onPostExecute(String result){
60         Toast.makeText(StatusActivity.this, result, Toast.LENGTH_
        LONG).show();}}
61 //Text Watcher methods
62     publicvoid afterTextChanged(Editable statusText){
63         int count = 140 -statusText.length();
64         textCounter.setText(Integer.toString(count));
65         textCounter.setTextColor(Color.GREEN);
66         if (count<10)
67             textCounter.setTextColor(Color.YELLOW);
68         if (count<0)
69             textCounter.setTextColor(Color.RED);}
70     publicvoid beforeTextChanged(CharSequence s, int start,
        int count, int after){}
71     publicvoid onTextChanged(CharSequence s, int start, int
        before, int count){}}
    
```

3.9 Adding Color and Graphics

The StatusActivity application looks quite dull. Android offers extensive support for good graphics.

3.9.1 Adding Images

To add a background to the screen, you'll be using some kind of a graphics
