

```
int duration = Toast.LENGTH_SHORT;
Toast toast = Toast.makeText(context,
msg, duration);
toast.show();
```

It will remain on screen for around two seconds before fading out. The application behind it remains fully responsive and interactive while the Toast is visible.

5.6.1 Customizing Toasts

The standard Toast text message window is often sufficient, but in many situations you'll want to customize its appearance and screen position. You can modify a Toast by setting its display position and assigning it alternative Views or layouts.

The following code shows how to align a Toast to the bottom of the screen using the `setGravity` method.

```
Context context = getApplicationContext();
String msg = "To the bride and groom!";
int duration = Toast.LENGTH_SHORT;
Toast toast=Toast.makeText(context,
msg, duration);
int offsetX = 0;
int offsetY = 0;

toast.setGravity(Gravity.BOTTOM,
offsetX, offsetY);
toast.show();
```

When a text message just isn't going to get the job done, you can specify a custom View or layout to use a more complex, or more visual, display. Using `setView` on a Toast object, you can specify any View (including a layout) to display using the transient message window mechanism.
