

```
public void respond(boolean _ok, boolean _includeLocation) {}
private void startAutoResponder() {}
```

7. Next, implement a Broadcast Receiver that will listen for incoming SMS messages.

a. Start by creating a new static string variable to store the incoming SMS message intent action.

```
public static final String SMS_RECEIVED =
    "android.provider.Telephony.SMS_RECEIVED";
```

b. Then create a new Broadcast Receiver as a variable in the EmergencyResponder Activity. The receiver should listen for incoming SMS messages and call the requestReceived method when it sees SMS messages containing the "are you safe" String you defined as an external resource in Step 4.

```
BroadcastReceiver emergencyResponseRequestReceiver =
    new BroadcastReceiver() {
        @Override
        public void onReceive(Context _context, Intent _intent) {
            if (_intent.getAction().equals(SMS_RECEIVED)) {
                String queryString = getString(R.string.querystring);

                Bundle bundle = _intent.getExtras();
                if (bundle != null) {
                    Object[] pdus = (Object[]) bundle.get("pdus");
                    SmsMessage[] messages = new SmsMessage[pdus.length];
                    for (int i = 0; i < pdus.length; i++)
                        messages[i] =
                            SmsMessage.createFromPdu((byte[]) pdus[i]);

                    for (SmsMessage message : messages) {
                        if (message.getMessageBody().toLowerCase().contains
                            (queryString))
                            requestReceived(message.getOriginatingAddress());
                    }
                }
            }
        }
    }
```
