

```

    }
};

public void requestReceived(String _from) {}

```

8. Update the onCreate method of the Emergency Responder Activity to register the Broadcast Receiver created in Step 7.

```

@Override
public void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.main);

    lock = new ReentrantLock();
    requesters = new ArrayList<String>();
    wireUpControls();

    IntentFilter filter = new IntentFilter(SMS_RECEIVED);
    registerReceiver(emergencyResponseRequestReceiver, filter);
}

```

9. Update the requestReceived method stub so that it adds the originating number of each status request's SMS to the "requesters" ArrayList.

```

public void requestReceived(String _from) {
    if (!requesters.contains(_from)) {
        lock.lock();
        requesters.add(_from);
        aa.notifyDataSetChanged();
        lock.unlock();
    }
}

```

10. The Emergency Responder Activity should now be listening for status request SMS messages and adding them to the ListView as they arrive. Start the application and send SMS messages to the device or emulator on which it's running.
11. Now update the Activity to let users respond to these status requests. Start by completing the respond method stub you created in Step 6. It should iterate over the ArrayList of status requesters and send a new SMS message to each. The SMS message text should be based on
