

layout and wire up the Spinner using the arrays defined in Step 3. Create two new stub methods `savePreferences` and `updateUIFromPreferences` that will be updated to save the autoresponder settings to a named `SharedPreferences` and apply the saved `SharedPreferences` to the current UI, respectively.

```
Spinner respondForSpinner;
CheckBox locationCheckbox;
EditText responseTextBox;
@Override
public void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.autoresponder);
```

a) Start by getting references to each View.

```
        respondForSpinner    =    (Spinner) findViewById(R.
id.spinnerRespondFor);
        locationCheckbox      =    (CheckBox) findViewById(R.
id.checkboxLocation);
        responseTextBox = (EditText) findViewById(R.id.responseText);
```

b) Populate the Spinner to let users select the auto-responder expiry time.

```
ArrayAdapter<CharSequence> adapter =
    ArrayAdapter.createFromResource(this,
        R.array.respondForDisplayItems,
        android.R.layout.simple_spinner_item);

adapter.setDropDownViewResource(
    android.R.layout.simple_spinner_dropdown_item);
respondForSpinner.setAdapter(adapter);
```

c) Now wire up the OK and Cancel buttons to let users save or cancel setting changes.

```
Button okButton = (Button) findViewById(R.id.okButton);
okButton.setOnClickListener(new View.OnClickListener() {
    public void onClick(View view) {
```
