

```
        savePreferences();
        setResult(RESULT_OK, null);
        finish();
    }
});
```

```
Button cancelButton = (Button) findViewById(R.id.cancelButton);
cancelButton.setOnClickListener(new View.OnClickListener() {
    public void onClick(View view) {
        respondForSpinner.setSelection(-1);
        savePreferences();
        setResult(RESULT_CANCELED, null);
        finish();
    }
});
```

- d) Finally, make sure that when the Activity starts, it updates the GUI to represent the current settings.

```
// Load the saved preferences and update the UI
updateUIFromPreferences();
```

- e) Close off the onCreate method, and add the updateUIFromPreferences and savePreferences stubs.

```
    }

    private void updateUIFromPreferences() {}
    private void savePreferences() {}
```

6. Next, complete the two stub methods from Step 5. Start with updateUIFromPreferences; it should read the current saved AutoResponderpreferences and apply them to the UI.

```
private void updateUIFromPreferences() {
    // Get the saved settings
    String preferenceName = getString(R.string.user_
preferences);
```
