

```

    public void onReceive(Context context, Intent intent) {
        if (intent.getAction().equals(alarmAction)) {
            String preferenceName = getString(R.string.user_
preferences);
            SharedPreferences sp = getSharedPreferences(preference
Name, 0);

            Editor editor = sp.edit();
            editor.putBoolean(getString(R.string.autoRespondPref),
false);
            editor.commit();
        }
    }
};

```

- c) Finally, complete the `setAlarm` method. It should cancel the existing alarm if the auto-responder is turned off; otherwise, it should update the alarm with the latest expiry time.

```

PendingIntent intentToFire;

private void setAlarm(int respondForIndex) {
    // Create the alarm and register the alarm intent receiver.

    AlarmManager alarms =
        (AlarmManager) getSystemService (ALARM_SERVICE);

    if (intentToFire == null) {
        Intent intent = new Intent(alarmAction);
        intentToFire =
            PendingIntent.getBroadcast(getApplicationContext(),
                                0,intent,0);

        IntentFilter filter = new IntentFilter(alarmAction);

        registerReceiver(stopAutoResponderReceiver, filter);
    }
}

```
