

32-bit Windows. If you are using 64-bit Windows, QEMU is not available.

- ▶ **Disk space:** At least 3 GB of free disk space is needed.
- ▶ **Filesystem:** MeeGo SDK should be installed on a hardlink-capable filesystem such as NTFS. FAT* filesystems are not hardlink-capable and not supported.

A Brief Walk-Through of the Steps

To help you understand what you need to do and where this section is going, here is a brief explanation of the steps needed to install the MeeGo SDK.

The first step is to download and launch the MeeGo SDK's install Wizard. This will allow you to select components that you want to install and will copy them to the correct directories on your system.

The installation process has been greatly simplified in the new Meego v1.2 SDK. This takes care of downloading files such as toolchains, build libraries, and virtual machine images. If there are errors on the network and the transfers fail, click on "Retry" when the installer tries to recover. This will most often result in successful continuation. However if this does not work, click "Ignore". This will skip the file and the SDK will be incomplete.

Now we configure Qt Creator, the MeeGo development IDE, to either run the QEMU emulator or set up a remote deployment device. The remote deployment device can be any MeeGo device such as a netbook or tablet. Deployments to the remote device are done over the network, and you will need to know the IP address of your remote device.

Hopefully that gives you a good overview of what we are trying to accomplish. Now on to work...

Download and install the MeeGo SDK Tools

- ▶ Download the MeeGo SDK Windows Installer (~54 Mb) from <http://developer.meego.com/meego-sdk>.
- ▶ Double-click on the downloaded .exe file and follow the prompts to install the SDK.

Note : If you are using Windows XP, please download a small file vc-redist_x86.exe (Microsoft Visual C++ 2008 SP1 Redistributable Package (x86)) from <http://www.microsoft.com/downloads/en/details.aspx?FamilyID=a5c84275-3b97-4ab7-a40d-3802b2af5fc2> and install it to your system. This is not needed for Windows 7.
