

Getting the output was really simple

- `Image {`
- `source: "img/digit.gif"`
- `x: 100; y: 150`
- `width: 167; height: 36`
- `}`

Adding the Hello Digit example, with the text and the image example we can write a simple piece of QML that starts to look a bit better.

- `import QtQuick 1.0`
- `Rectangle {`
- `id: myRectangle`
- `width: 500`
- `height: 400`
- `Text {`
- `text: "<h1>Hello Digit</h1>"`
