

You make a page action appear and disappear using the `show()` and `hide()` methods, respectively. By default, a page action is hidden. When you show it, you specify the tab in which the icon should appear. The icon remains visible until the tab is closed or starts displaying a different URL. Packaged apps cannot use page actions.

Themes

A theme is just like an extension which changes the way your browser looks. They don't have any function besides 'looking cool'.

Android theme applied to Google Chrome

This is a manifest file for a theme:

```
{
  "version": "2.6",
  "name": "camo theme",
  "theme": {
    "images" : {
      "theme_frame" : "images/theme_frame_camo.png",
      "theme_frame_overlay" : "images/theme_frame_stripe.png",
      "theme_toolbar" : "images/theme_toolbar_camo.png",
      "theme_ntp_background" : "images/theme_ntp_background_norepeat.png",
      "theme_ntp_attribution" : "images/attribution.png"
    }
  }
}
```
