

APPLICATIONS FOR MOBILE DEVICES USING FLEX

The power to create mobile apps, across
platforms!

The Adobe Flash platform, in general, now comprises a varied set of integrated technologies that empower and enable developers to create rich internet applications that can be run consistently and efficiently across multiple mobile devices working on different platforms. In this chapter, we will be discussing the various tools and workflows that can be used for the development of cross platform functional mobile applications within the Flash platform and the different devices and OS platforms you can aim at targeting. It is important to that this is only with respect to what we can do with Flash today. Soon we might be able to do much more. During the Mobile World Congress 2011 in Barcelona, Adobe
