

The potential benefits of Nanotechnology are mind boggling and brain enhancing. The future of Nanotechnology is completely uncharted territory. It is almost impossible to predict everything that nanoscience will bring to the world considering that this is such a

young science.

There is the possibility that the future of nanotechnology is very bright, that this will be the one science of the future that no other science can live without. There is also a chance that this is the science that will make the world highly uncomfortable with the potential power to transform the world. Here we present to you some of the future scenarios-both promising and terrifying- that nanotechnology might bring about.

Fountain of Youth

In June 2010, Thomson Reuters, one of the world's leading sources of intelligent information for businesses and professionals, came out with a report entitled "Can Nanotech Unlock the Fountain of Youth?" The report claimed that in its eternal pursuit of the fountain of youth, the beauty industry has zeroed in on Nanotechnology as its wonder child. This innovation frontier is being used in creams that make wrinkles vanish; shampoos that deliver vitamins deep into the cellular
