

harm your computer. Are you sure you want to run this file?" This same warning is presented whether the file is a common program or a piece of malware. Other browsers leave it up to you to decide if a program is safe to download and run from the Internet. Internet Explorer 9 is the only browser that uses Application Reputation to help you make safety decisions.

What happens if a download doesn't have a positive reputation?

A downloaded program is first checked against the Application Reputation service. For the vast majority of downloads, the downloaded program will have a positive reputation and the program can be downloaded and run with no browser warnings. However, in the rare case that a download does not have a positive reputation, you are warned and can choose to delete the program immediately or pick an option from the Actions button found on the notification bar or in the Download Manager. This warning gives you additional information about the risk of your activity so you can choose to proceed with the download or not.

SmartScreen URL filtering improvements

The SmartScreen URL filter continues to be a key safety asset of Internet Explorer 9.

The new Download Manager blocks downloads from known malicious websites. When a malicious download URL is detected, a warning is shown in the new notification bar and in the Download Manager. At this point,
