

HTML5 – AN INTRODUCTION

We've heard a lot about HTML5.
Whether you're wondering if it's a
development platform, or you are
already working on it, this chapter will
help you understand its concepts better.

HTML5 is brand new. Indeed, it is far from even being finished yet. If you were to listen to some authorities on technology, they'd tell you it'll probably not be ready for another decade! Down to its fundamentals, HTML5 is a language for structuring and presenting content for the world wide web. It is the fifth revision of the HTML standard (originally created in 1990 and most recently standardised as HTML4 in 1997). As of September 2011, HTML5 is still under development and expected to be finalised by 2016. However many components with HTML5 spectrum are ready for use already.

What you should know...

Before we get down to the history of HTML5 and how we got where we are, here are five things that you should know about HTML5:
