

# CROSS BROWSER COMPATIBILITY

The browser market has a wide range of choices. In order to ensure your web site has the best experience, you need to optimise it across all browsers!

## Introduction

Building web applications that provide a good user experience regardless of what browser the user is using to visit the site therefore becomes a critical aspect of web development. This situation is aggravated by the fact that not only do web developers have to worry about different brands of browsers (IE, Firefox, Chrome and Safari) they also have to deal with different versions of the same browser. While this might sound like a sad state of affairs, fortunately there are a few techniques that we can employ to deal with this issue.

## Polyfills and Shims

A common refrain that one encounters with web developers is the idea that HTML5 is mostly just hype because of the ground reality that browser usage
