

BADA SDK INSTALLATION

Here you'll read about all the to-dos in order to get started with the bada SDK

Before you can get started with developing bada applications, you need to install the bada SDK (software development kit). Before installing the SDK, make sure that your computer fulfills the defined system and software requirements.

Prerequisites

To develop in bada, you need:

- ▶ PC (with the bada SDK installed), with the following system requirements:
 - Microsoft Windows® XP 32-bit, Windows® Vista 32-bit, or Windows® 7 32- or 64-bit operating system
 - At least dual-core 1.8 GHz of CPU
 - At least 2 GB of RAM memory
 - At least 2.2 GB of free disk space
 - Local administrator authority
 - Screen resolution of the system must be greater than the resolution of the Emulator.
