

bada IDE

The bada IDE is an integrated development environment that provides a set of development tools, such as C++ editor, compiler, debugger, Application Wizard (for creating application projects), UI Builder (for designing the application UI), Potential Bug Checker (for tracing bugs in source code), API and Privilege Checker (for checking API and privilege usage violations), Memory Usage Checker (for monitoring the memory usage of an application), Profiler (for optimising application code), JavaScript Debugger (for debugging Web applications), Testing Tool (for unit testing), and UI Sequencer (for testing the application UI).

The bada IDE is based on the Eclipse CDT (C/C++ Development Tools) and JSDT (JavaScript Development Tools). Eclipse provides a set of code editing tools in its text editor. These tools support CDT features, such as syntax highlighting, code folding, tabbed documents, and content assistance (context-sensitive code completion).

The IDE UI consists of various views, which can be opened from **Window > Show View or Window > Show View > Other > bada**. The most important bada-specific views are:

Output: Shows the log, debug, and exception messages.

Resource Explorer: Shows the resources included in a project. It also allows you to easily add forms to your project.

Profile: Shows a summary of the methods called during an application's execution, such as call count and execution time.

Problems: Shows build errors or warnings, and the results of the Memory Usage Checker and API and Privilege Checker tools.

Some views are visible in specific perspectives only. To switch perspectives, go to **Window > Open Perspective > Other** and select the required perspective.

Installing Plug-ins for the bada IDE

To install new plug-ins for the bada IDE:

1. In the bada IDE, select **Help > Install New Software**.
2. From the Work with drop-down list, select <http://static.bada.com/feature-update/> as the software site.
3. Select the plug-ins to install and click Next to continue and complete the installation process.

Updating the bada IDE

To check for bada IDE updates and install them through the IDE:
