

APPLICATION DEVELOPMENT PROCESS

Once you've installed the SDK and IDE, you are all set to develop on bada. Let's look at the steps involved in making your idea a reality.

Samsung bada provides the tools required to manage your application's lifecycle from product conception, through development and release, to end-of-life application retirement.

Application profile

You must define the application profile before you can start to develop your application's functionality.

The application profile ensures that you have full access to the services provided by bada by defining the following basic information:

1. Name and version of the application
2. API version used in the application
3. Privilege groups assigned to the application
