

There can only be one frame per application.

To create a compelling user interface (UI) for your application, use UI Builder included in the bada IDE. UI Builder is a WYSIWYG tool that you can use for designing the UI and creating the Form and all UI controls for C++ and flash applications.

## Adding forms

To add a form to your application resources:

1. In the bada IDE Project Explorer, select the application project to which you want to add a new form.
2. The Resource Explorer shows the resources of the selected application.

If the Resource Explorer is not visible, select **Window > Show View > Other > bada > Resource Explorer**.

Right-click **Forms** and select **New Form**.

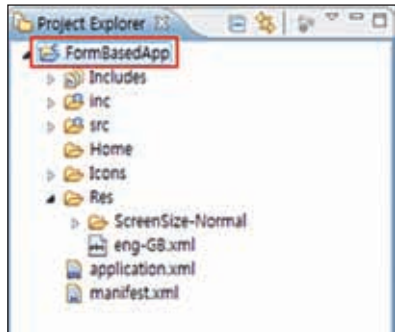

3. In the Resource Explorer, double-click the new form to open it in the work area.
4. You can add an indicator bar, header, and footer to the form using the Properties tab.

You can also change the orientation of the form from portrait to landscape.

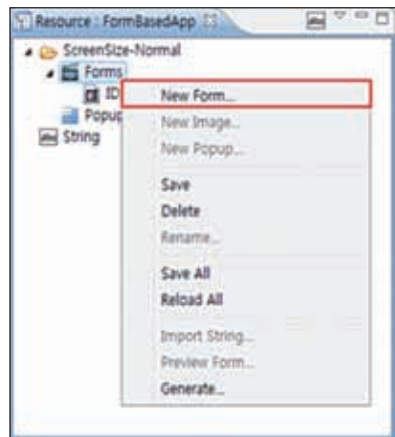

5. Create an `Osp::Ui::Controls::Form` class for the designed form:

- In UI Builder, right-click and select **Add Class**.
- Enter a class name for the form.
- Enter names for header and source files.

Once you have finished adding a form to your applica-
