

You can add scroll panels to `Osp::Ui::Controls::Form` classes and define properties for them in the same way you create forms.

To add and design a scroll panel:

1. Drag the Scroll Panel control from the ToolBox to a form.
2. Double-click the new scroll panel in the Resource Explorer to open it in the work area.
3. Design the scroll panel as you design a form. You can add controls to the scroll panel from the ToolBox, and define properties for the scroll panel and the added controls in the Properties view.

Once you have finished adding a scroll panel to your application form, you can use the scroll panel's ID (`IDC_SCROLLPANEL1` in the following example) to static cast the scroll panel in your application code:

```
• bool Form1::OnInitializing()
• {
•     ScrollPanel *pScrollPanel;
•     pScrollPanel = static_cast<ScrollPanel
•>GetControl(L"IDC_SCROLLPANEL1", false));
• }
```

Your Scroll Panel added in bada

Using Pop-ups

You can add pop-ups and define properties for them in the same way you create forms.

To add and design a pop-up:
