

```

• pFooter->SetStyle(FOOTER _ STYLE _ TAB);
•
• // Create the Button footer item
• FooterItem footerItem1;
• footerItem1.Construct(ID _ FOOTER _ ITEM1);
• footerItem1.SetText("Button");
• pFooter->AddItem(footerItem1);
•
• // Other footer items are set here
•
• pFooter->AddActionEventListener(*this);
• }

```

4. The panels are created and added to the form.

```

• // Create the Button panel
• ButtonPanel* pButtonPanel = new ButtonPanel();
• pButtonPanel->Initialize(rect);
• AddControl(*pButtonPanel);
• __ pPanel[0] = pButtonPanel;

• // Orientation panel was created with UI Builder,
• // so only its button events must be defined here
• __ pPanel[1] = static_cast<Panel *>(GetControl("IDC _
ORIENTATIONPANEL"));
• if(__ pPanel[1])
• {
•     __ pButtonOrientation = static_cast<Button
*>(GetControl("IDC _ BUTTON _ ORIENTATION",
•         true));
•     if(__ pButtonOrientation)
•     {
•         __ pButtonOrientation->SetActionId(ID _ ORIENTA-
TION);
•         __ pButtonOrientation-
>AddActionEventListener(*this);
•     }
• }

• // Image and Privilege panels are created similarly as
the Button panel

```

5. Finally, set the current panel to be selected in the footer, and use the Set-
