

```

•     }
•     default:
•         break;
•     }
•     Draw();
•     Show();
• }

```

Basic App - Panels

The BasicApp sample application uses the bada Form Based Application template, which contains a preset `Osp::Ui::Controls::Form` class. Most methods used in the sample remain as they were created in the project template.

Initialise the application

1. ImagePanel.h Header File

- a. The Image panel displays a bitmap image, whose size depends on the screen orientation. Apart from declaring the `Osp::Ui::Controls::Panel` class, the `Osp::Ui::IOrientationEventListener` interface is also declared to react to changes in the screen orientation.

class ImagePanel:

```

•     public Osp::Ui::Controls::Panel,
•     public Osp::Ui::IOrientationEventListener

```

- b. The `Osp::Graphics::Bitmap` class is used to encapsulate a bitmap, which consists of pixel data for a graphics image.
