

OVERVIEW OF BADA

Samsung bada is a smartphone platform that powers millions of handsets globally. bada means ‘ocean’ and refers to open possibilities.

Samsung bada is a user-interactive and service-oriented smartphone platform that allows you to create feature-rich applications for bada devices using C++, Flash, and web programming. The bada platform allows you to create a wide range of applications:

bada architecture

The bada architecture consists of the following four layers:

Kernel

As is the case with an mobile operatin system, the bada kernel contains either the real-time operating system or the Linux kernel.

Device

This layer contains the core functions of the mobile device platform that
