

HelloFlashApp project

of the IDE, with default content in the application.xml file as well as in several project folders. The selectedmanifest.xml file is also included in the project.

4. Creating the Application Code

Your HelloFlashApp project uses the Flash Based Application template. As such, your project's source files already contain some of the basic flash application functionality.

The automatically-included code creates an application with a flash control laid on the main form. You can use UI Builder to set the style and layout of the flash control. Additionally, you can define the properties, such as background color, local file path, and quality, for each control. **4**
