

WEB PROGRAMMING FOR BADA

bada offers your flexibility in developing web applications

Samsung bada provides a wide range of namespaces that allow you to take full advantage of various bada features.

Basics of bada web programming

You need to take into account the following programming concepts when designing bada web applications:

Class

A class is a central concept in most of the object-oriented languages. It is declared using the Class keyword with an uppercase 'C', and by providing its name as a string:

- `Osp.Class.define("My.Cool.Class");`

The above example creates a trivial class called `My.Cool.Class` with no functionality.

A class declaration can contain object-oriented features, such as the con-
