

in the previous step). For all other values, use the default values in the application wizard.

The new HelloWorld project is shown in the Project Explorer view of the IDE, with default content in the `application.xml` and `HelloWorld.js` files as well as in several project folders. The selected `manifest.xml` file is also included in the project.

3. Creating the Application Code

- a. Your HelloWorld project uses the bada web Application template.

As such, your project's source files already contain some of the basic application functionality.

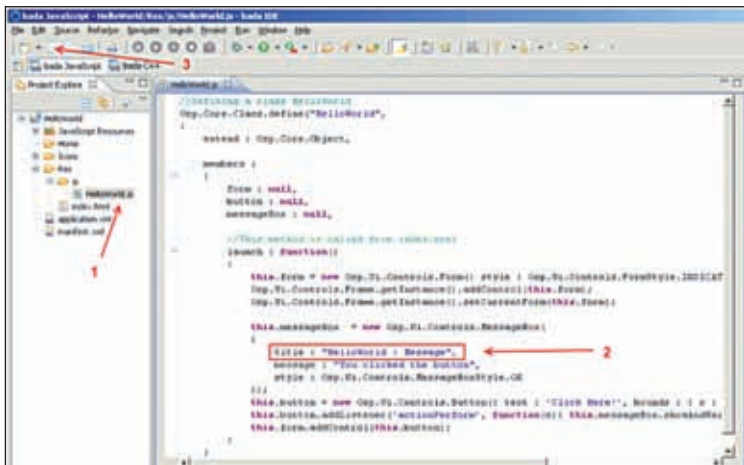

The automatically-included code creates an application with a button which, when clicked, displays a message box with the title `HelloWorld : Message`. To change the title to "HelloWorld", take the following steps (illustrated in the following screenshot):

- b. Open the `HelloWorld.js` file in the IDE JavaScript Editor.
- c. Change the title to HelloWorld.

4. Save the file.

Basic web app

This chapter, based on the `BasicWebApp` sample delivered with the bada SDK in `<BADA_SDK_HOME>\Samples\BasicWebApp`, demonstrates how

HelloWorld project
