

```

    BUTTON _ Y: 180,
    BUTTON _ WIDTH: 450,
    BUTTON _ HEIGHT: 60,
    IMAGE _ LABEL _ WIDTH: 450,
    IMAGE _ LABEL _ HEIGHT: 200,

    ACTIONID _ FOOTER:
    {
        BUTTON _ PANEL: 1,
        ORIENTATION _ PANEL: 2,
        IMAGE _ PANEL: 3,
        PRIVILEGE _ PANEL: 4,
    },
},

The launch() method launches the application, creates the
form, and initializes all the panels.
    launch: function()
    {
        this.createForm();
        this.InitializeAllPanels();
    },

    // Member methods are defined here
}
});

```

Creating a Form

The form creation functionality is implemented in the BasicApp.js file.

1. Creating the Form

The `createForm()` method is used to create an `Osp.Ui.Controls.Form` class instance. During the creation, the indicator area, header, and footer are also automatically created for the form by setting them as form styles.

```

    createForm: function()
    {
        this.basicForm = new Osp.Ui.Controls.Form
        ({
            style:Osp.Ui.Controls.FormStyle.INDICATOR |
                Osp.Ui.Controls.FormStyle.FOOTER |
                Osp.Ui.Controls.FormStyle.HEADER

```
