

IBM WATSON – THE SMARTEST AI IN THE WORLD

IBM has always been at the forefront
of artificial intelligence research and
the Watson is its most advanced
system so far

In previous chapters, we took a look at several aspects of artificial intelligence. We traced the different types of AI and spoke about where science fiction writers saw it going. We took a look at the various intelligent agents already functioning in the world today and the world of chatterbots mesmerising us with their ability to be human-like. Given all this information, the next step is a simple one asking “what is the world’s smartest artificial intelligence system today?” Folks, meet the IBM Watson.
