

LOOKING AT AI UNDER A NEW LIGHT

While artificial intelligence has been a form of science for several decades, a group of boffins now wants to rethink the very way we look at this field

In the previous chapter, we saw that computer scientists and futurists like Markram and Levy are optimistic about where artificial intelligence is headed. But it could be argued that their ideas remain firmly grounded in the way the field was defined by the thinkers in the 1950s and 60s, like Herbert Simon, John McCarthy and Roger Schank.
