

3. You can also specify a phone number or email address to receive the incoming snapshots.
4. Next, press “Show advanced settings”, and you can configure Motion Detector Pro to start up when you send it a specific text message. Define particular zones in your camera feed that you want it to monitor and turn on a stealth mode that closes the app as soon as the phone is touched.
5. Once you’ve finished tweaking the app, activate the motion detection and you’re good to go.
