

your network. To know the MAC address of a Windows PC, open the Command Prompt. Type `ipconfig /all` and press Enter to bring up your IP settings. Here you'll be able to see the details of your network along with the MAC address under the name of Physical Address.

If you're on a Mac, open System Preferences and click "Network". From there, select Wi-Fi from the list in the left-hand column, click "Advanced" and look for Airport ID or Wi-Fi ID. If you want to find the MAC address of a handheld or any other device, check the user manual. You can also find the MAC address of this device if it's connected to a network. Your router displays a list of devices connected to your network along with their MAC address in the router administrator.
