

Kaspersky Lab becomes a Leader in the Magic Quadrant

Kaspersky Lab has been named a **'Leader'** in the **Magic Quadrant for Endpoint Protection Platforms**.

The Magic Quadrant is the most influential benchmark for companies seeking to evaluate vendors and products in the IT security industry based on criteria in two categories: completeness of vision and ability to execute. It plays a very important role in purchase decisions of enterprises on a global scale.

Kaspersky Endpoint Security 8's rapid and comprehensive malware detection, its manageability, advanced HIPS features and broad endpoint platform support are factors that have played a role in its new position on the quadrant.
