

OFFICE APPS

Who better to bring office applications to the smartphone than Microsoft?

This isn't the first version of Office that Microsoft has released for its smart phone OS, of course. But it is the most full-featured so far. Thanks to a new emphasis on the tasks that make the most sense for mobile devices note taking, over-the-air connectivity with your workplace's document repositories, and excellent word processing document, spread sheet, and presentation viewing capabilities, along with basic editing functionality, Office Mobile is a great companion for any Microsoft Office user.

It also takes advantage of the unique capabilities of today's Windows Phones, with touch and gesture support, integration with the virtual keyboard and its on-the-fly suggestion functionality, and a cool new hub-based
