

complex formatting options that are available on the Web and on the PC. However, if you save these documents externally to the phone, you can later edit them again in Windows or on the Web and add complex new formatting easily enough. If you want to create new PowerPoint presentations on the go, you're out of luck: You cannot create a new presentation with PowerPoint Mobile. (That said, you could of course create basic, empty presentations and save them to the device as templates for future presentations. It does support Save As.)

The Office Hub

In previous Windows Mobile versions, the available Office Mobile applications were accessed individually. That is, you could find and launch Word Mobile, Excel Mobile, PowerPoint Mobile, or OneNote Mobile (or the Outlook-based e-mail, calendar, and contacts solutions) individually. In Windows Phone, that is no longer the case. In fact,

aside from the e-mail, calendar, and contacts solutions built into Windows Phone, there are no individual Office applications outside of the Office hub. So if you want to access any Word, Excel, PowerPoint, OneNote, or SharePoint Workspace functionality on Windows Phone, you'll need to do so through the Office hub.

As noted previously, the Office hub consists of four sections, and provides access to five Office Mobile experiences: OneNote Mobile, Word Mobile, Excel Mobile, PowerPoint Mobile, and SharePoint Workspace Mobile. I discuss each of these solutions in turn in the following sections.

Word Mobile is a cool addition

Access online documents

If you believe that the future of computing is both mobile and connected, then it stands to reason that Microsoft's mobile platforms and various connected
