

THE EMERGENCE OF GOOGLE ANDROID

The most direct rival to Apple's iOS software is the ubiquitous Android platform, backed by Google and adopted by several prominent device manufacturers over the world. Android gained favour as a viable alternative to iOS and quickly established itself as the quickest growing and most widely used smartphone platform. Its popularity can be credited to its openness, which ensured a developer-friendly environment and a vibrant app-ecosystem, and enabled handset manufacturers to port Android onto a wide range of devices resulting in a
