

WHY SHOULDN'T YOU HACK?

Because you are not expected to. There – in half a line, the entire gist of the article. And because you are reading beyond that, we infer that you obviously want to know more. That shouldn't be a problem – that's exactly what we're here for! What you need to understand is that when you hack into your device, you are essentially bidding farewell to any form of warranty or authorized support you were entitled to; from now on, the service guys will only try to work their way around your problem, and at any point that they so desire, they may put their hands up and say that they cannot do anything about it. If they deem it so, the product will be declared 'unusable' and you might be stranded with a worthless brick of a device. In fact, there is a term for it - 'bricking', where your phone's software has been so badly damaged that it is as useful
