

to do on your device. Open up “Cydia” on your iPhone (if you can’t find it on your homescreen, search for it) and let it complete its processing. It’ll also ask you if you’re a “User”, “Hacker” or “Developer.” If you don’t know what to choose, then you should choose “User,” besides you could always change this in the settings. If you’re connected to WiFi or 3G Cydia should present a screen like this.

Cydia is the App Store of the jailbreak world. Unlike Apple’s App Store, Cydia doesn’t have any restrictions, and you can install all sorts of

The Cydia store for jailbroken devices

The ‘Changes’ tab of the Cydia app

apps, tweaks and themes that wouldn’t have made it to the App Store due to guideline violations.

Tap on the “Changes” tab at the bottom, and hit “Refresh” at the top if you don’t see a list like this. If you see any “Essential upgrades” dialog, hit the upgrade button and proceed as Cydia says.

The “Sections” tab categorizes all that’s available on Cydia into various sections for easier discovery. The “Changes” tab is a list of all tweaks arranged in reverse chronological order depending on when they were added or updated. The “Manage” tab lets you manage installed software and also add “Sources.” Sources are places on the web where this software is hosted. You don’t need to worry about this much since Cydia already has a number of sources added by default. “Search” is of course to find by name. Many tweaks, after installation, might present a button to “respring” or restart your iPhone. This is to ensure that the installation gets completed without any problems.

Also note that unlike apps on the App Store, many installations from Cydia might not add an icon to your homescreen.

When you start looking at the list, you will very likely be overwhelmed by the
