

Jailbreaking Samsung devices

For this tutorial, we will show you how to jailbreak an upgraded, first generation Samsung device. This includes the Samsung Focus (v1.4 or earlier) and the Samsung Omnia 7.

Window Break (interop or developer unlock)

The simplest hack, specifically for Samsung devices, is the “Window-Break” project. To do this,

- ▶ Set your browser’s Website preferences to “Mobile Version”. To do this open your browser, open settings and select “Mobile version”.
- ▶ Head over to <http://windowsphone-backer.com/windowbreak>
- ▶ Tap on “WindowBreak Me”, a new page will open.
- ▶ Tap on windowbreak.xml, you will be greeted with a blank page.
- ▶ Open the diagnosis window by dialing ##634# in the dialer.
- ▶ Enter *#9908# in the app that opens, this will run the GPRS manager.
- ▶ Tap the drop-down menu and tap “windowbreak” and hit “save”.
- ▶ Wait a few seconds till you see a message in the text box below.
- ▶ Restart the phone.
- ▶ Your phone is now developer unlocked!

The Samsung Focus can be unlocked using the interop method shown here.

The true jailbreak

Time for some advanced stuff. To hack your Samsung Focus, you need to first determine the “HW Version” number of your device. The process for the Samsung Omnia 7 is similar. You need to do this because there are different ROMs for different versions so please check before proceeding. To do that:

- ▶ Dial ##634# in the dialer.
- ▶ Enter *#32489# in the “Diagnosis” menu that pops up.
