

- ▶ Press the on screen “back” button 4 times till you see a “Main Menu”
- ▶ Type “2” to select “Version Information”
- ▶ Type “2” to select “HW Version”
- ▶ Type “1” to select “Read HW Version”
- ▶ You will now see a message on screen saying something like “HW Version: Rev 1.X” where X is your version number.

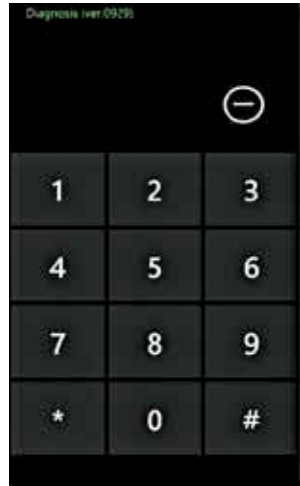

Before you begin your jailbreak, download the following software:

- ▶ DFT SammyRainbow.zip from <http://dgit.in/M7nNZC>
- ▶ A custom ROM from <http://dgit.in/MbkDim>. The entire page is in Chinese so remember to translate it into English (unless you speak Chinese of course) and make sure the default language for the ROM is English. Read carefully what each ROM has to say about itself and you can then decide for yourself which ROM will best suit your needs.
- ▶ Download and install ActiveSync from <http://dgit.in/MuLSXf>

Now that you have everything and have made sure you read and understood everything in “Important Notes”, you may proceed.

- ▶ Extract the files from the DFT-SammyRainbow.zip file that you downloaded.
- ▶ Run the DFT MAGLDR installer.
- ▶ Put the phone in “Download” mode. To do that:

- Turn off your phone.
- Press the Volume up, camera and power buttons simultaneously.
