

- ▶ Connect your device to the computer via USB.
- ▶ Select your device from the DFT MAGLDR installer screen. it's paramount that you select the right device, there is a very good chance of rendering your device completely unusable otherwise.
- ▶ Proceed with the installation.
- ▶ When the installation is successful, disconnect your phone from the computer.
- ▶ Put your phone into "recovery" mode by:
 - Turning off your phone and then pressing the Volume down, Camera and power buttons simultaneously.
- ▶ Press the back arrow on your phone at the screen that follows. Pressing the Windows key will format the device so be careful.
- ▶ Select the custom ROM that you decided on, extract the files and run the DFT installer for that ROM.
- ▶ Check the device and its version again (at the install screen) and ensure that it's the same as that of your phone's.
- ▶ Make sure ActiveSync is installed.
- ▶ Connect your phone to the PC while still in recovery mode.
- ▶ Allow the MAGLDR device driver to install.
- ▶ The installation might fail at this point but do not worry, just restart the installation again. This happens if when the MAGLDR driver fails to install on time but is only a minor issue.
- ▶ You should see an installation bar on your phone, if you don't, start over.
- ▶ When the installation is completed, reboot your phone by removing the battery and reinserting it, if it doesn't happen automatically.
- ▶ Restart the phone and put it back into recovery mode.
- ▶ When prompted, press the Windows logo on your phone to format it.
- ▶ The phone will reboot after the formatting process and will be in its initial factory state. Reset all your settings, verify that the phone is working and you're good to go. You are now the proud owner of a properly rooted, jailbroken, windows phone device.
- ▶ Note that the final rebooting process might take a while so don't panic if it's taking too long or if the screen appears to be frozen. If it stays like that for half an hour or more however, well, you can at least claim that you have an unusual taste in paper-weights!

You can now freely side-load apps, follow this link to get more information and some free apps <http://dgit.in/KUsxbw> and/or participate in the app development process.
