

- ▶ HTC devices are extremely sensitive to the jailbreak process.
- ▶ Each device has a specific MID, which must be noted before you proceed. The method is different for each series of MIDs.
- ▶ The reason behind the importance of MIDs is that each device has a different Secondary Program Loader (SPL) that controls the bootloader. This SPL must be replaced with a cracked SPL, which, if not done correctly, will result in a completely bricked and un-recoverable device. So, proceed with caution.
- ▶ Custom ROMs are available at the DFT site mentioned earlier. (<http://dgit.in/MbkDim>)
- ▶ Detailed instructions can be found at <http://dgit.in/MyMNno>. Make sure that you read the instructions carefully to avoid bricking your device.
