

manufacturers come out with a lot of models to appropriately segment the market. At times they may use the same hardware but disable certain modules or parts - maybe a GPS unit for instance. In this case replacing the firmware may allow you to activate that disabled hardware unit, thereby enhancing your lower model camera to a higher model.

Apart from unlocking hardware modules, certain

DSLR v/s Point-and-shoot

Cameras are broadly divided into two categories: Point-and-Shoot(PnS), and DSLR(Digital Single-Lens Reflex). The consumer grade PnS cameras are used by amateurs professionals alike. They are compact, lightweight and designed for simple operation. PnS cameras come with auto-focus, built in flash units and automatically set the exposure options. However, most new models from all major brands can somewhat hold their own against DSLRs. These are single lens cameras that let you view directly through the lens and see exactly what will be captured, unlike the viewfinder in point-
