

CHDK does a lot more to your camera. Visit the following link to read the full list of features <http://dgit.in/MvpniP>.

Magic Lantern for your Canon DSLR

Magic Lantern is also an enhancement on top of your video-capable Canon DSLR's firmware which gives it professional video camera like features. It isn't a firmware upgrade, but basically a software that runs alongside your stock firmware. Initially it was developed for independent filmmakers and tailored to enhance video capabilities of Canon 5D Mark II. With time it attracted developers interested in both still photography and DSLR videography. Magic Lantern was then ported to smaller cameras like 550D, 50D, 60D, 600D and 500D.

The installation process is similar to CHDK. To install it on your camera, read the instructions guide here <http://dgit.in/NbACjs>.

What will it do for you?

Magic Lantern allows greater control over audio settings and lets you program a mechanical rack focus which is quite essential when it comes to shooting videos. Also, it allows you to adjust within a greater scope when it comes to frame rates.
