

3. Now we begin the encryption process:

- Take the first letter of the plaintext: 'T'.
- Take the first letter of the keyword: 'T'.
- Find the corresponding of letter for 'T' in the row beginning with 'T'.
It is 'B'.

Now you have to repeat the process again from step 3.a to 3.c. This time you would take the second letter of the plaintext and find its corresponding alphabet in the row marked by the second letter in the keyword. Hence, the letter to be encrypted is 'L' and the row you have to see its replacement in is 'R'. The result is 'C'.

Now, the keyword is 5 characters long but the plaintext is longer than the keyword. So how do you encrypt the 6th character? Well, you use the first character of the keyword again. To encrypt the 7th character of the
