

Changes in the regular desktop apps

Windows 8 won't bring about any changes to any third-party applications except for their title bars. However, many a thing has changed for the apps that come packaged with Windows itself, especially the Explorer.

Changes in Windows Explorer

You'll find that Microsoft has decided to remove Windows Explorer from Windows 8. It's now called 'File Explorer'. While this move may fail to impress, the changes in its looks, features and functionality are bound to impress

File Menu in Windows 8 File Explorer

you. If you were happy with Windows Explorer in Windows 7, Windows 8's File Explorer will please you even more. Since most of our work with the OS revolves around files and File Explorer is a constantly summoned tool, it affects a large part of how we interact with the OS.

The biggest change to the explorer is the addition of the ribbon, not unlike the one you've seen on Office 2010. You can collapse the ribbon bar to save space when you wish to. File explorer normally hosts four tabs in the ribbon bar: File, Home, Share and View. Let's talk about each of these tabs:

Well spaced controls are good only for the tablets

File tab

This holds the usual menu. Useful as it may seem, there resides another option to open a command prompt right away and it will 'cd' you into the directory you have open in the explorer window. Similarly

you could open up the Windows PowerShell too. Help, Delete history and Close are the other obvious options. Open new window is another useful one.

Home tab

The most common functions related to files are under the home tab of the File Explorer. Functions such as Cut, Copy and Paste are on the left-hand
