

View tab in Windows 8 file explorer

primary purpose of hiding the file. The only good purpose it can serve is to make sure that [Ctrl + A] doesn't select a hidden file or folder – useful if you were to delete them all. Viewing file extensions is an option right up there on the ribbon as a checkbox. And just in case you need more control, the old 'Folder Options' dialog box can be accessed by clicking the Options button.

Miscellaneous tabs

Miscellaneous tabs, one for each type of file or location can appear on the ribbon bar. For example, when you're in the 'Computer' window (the system 'Computer' folder which lists the available drives), the Home and Share tabs disappear and the Computer tab comes up with links to Control Panel, System Properties, Program management and Computer management tool.

Again, depending on what file you have selected, file explorer would bestow a new tab e.g. 'Play' for video and audio files and 'Manage' for picture files. Selecting a drive in the Computer folder will add the tab to manage the drive – format, defragment, enable bitlocker and disk cleanup. All of this makes it a whole lot easier for those who could not follow the long instructions like "right-click drive, go to properties, and switch to the Tools tab".

File Explorer is one of the best changes made to the Windows 8 UI. It comes with almost all the goodies we've been waiting for and wait, the 'Folder up' button is back too! Most used functions which were hidden beneath menus and tabs are now on the ribbon. One can add the more frequently used functions on the quick access bar and personalize the experience altogether. You can minimize the ribbon using the button located just beneath the Close button on the title bar for some extra screen space as well.

Changes in Task Manager

The Task Manager has been an integral part of the toolkit for every Windows user. The default layout of the task manager in Windows 8 is simple. If you had the luck to see a Windows 98 task manager, you'd be able to relate instantly. However the advanced view on clicking 'More details' would show you that the task manager in Windows 8 has been given a semantic
