

view and other graph overviews will appear very similar. However, you can have only one task manager running despite your wishes to have multiple windows floating around. You can disable/enable the small graph boxes on the left pane via a right-click menu option. As always, you have the link to Resource Monitor on the performance tab to have a detailed look, if you desire.

App History tab shows the list of apps with their respective resource usages since Windows 8 was installed, or when you last cleared the usage history. This can help discover the apps which have been utilizing too much of network bandwidth or the ones which keep the CPU busy to drain the battery.

The only change on the Services tab is a link to open the Services Management Console instead of a button. However, there is a new Startup tab which shows the list of applications that start up when you log in to Windows. You have options to not just disable the app from starting up but also to find the file location or search online. The search online feature will launch Bing search with the process filename as the search parameter. Traditionally, controlling startup applications has been a part of the msconfig system configuration tool until now. The msconfig tool in Windows 8 just links to the task manager instead.

The Users tab now gives the details of resource utilization by processes running under the respective user accounts. Details tab lists the processes the way older versions of Windows have been doing under the Processes tab. In other words, we still have the old 'Processes' tab, although now renamed to 'Details'.

Most other apps have not changed. Except of course, the title bar and the new looks Windows 8 brings to the table by default, Notepad, WordPad, Paint, Calculator and other accessories have gained absolutely nothing in the new version.

Two arrows for one target

On more than one occasion you'll find yourself with more options than needed. The inclusion of Modern UI in Windows 8 has given way to a dual approach to accomplish mundane tasks. While it's good in its own right, it does cause a little trouble and confusion: two Control Panels, two Internet Explorers, two music apps, two picture viewers...phew!

Internet Explorer

Internet Explorer 10 looks pretty much the same as it looked on Windows 7. But there's more to it. Windows 8 comes with two versions of Internet
