

Shutdown immediately:

`shutdown /s /p`

Reboot immediately:

`shutdown /r /p`

To add a time delay of x seconds to the shutdown process, just add a space followed by a “/t x” after the above commands.

If you are not familiar with the process of creating a shortcut, just right click on an empty space on your desktop or any open folder in Explorer, and under the “New” menu click on “Shortcut”.

Change Window Border Size

Windows 8 comes with an unfortunately large size of window borders. Even worse is the fact that there is simply no personalisation option available for changing this setting, even though it was available in earlier versions of Windows.

In Windows 8, changing the border width and other such settings requires editing the registry. Even so, it is a simple hack and can be accomplished by following the steps below:

- ▶ With the Windows start screen open type “regedit” and press enter to launch the Registry Editor.
- ▶ Browse to `HKEY_CURRENT_USER\Control Panel\Desktop\WindowMetrics`
- ▶ The setting we want to change is `PaddedBorderWidth` double click the setting to change the value.

The default value here should be -60, and the larger the negative value, the larger the border. In other words, setting this to -10 will reduce the border a lot.

Add More File Storage Providers for Apps

Windows 8 by default comes with support for browsing Microsoft SkyDrive, which provides 7GB of free storage if you have a Microsoft account. We are assuming you already have a Microsoft account because you need it to access the Windows 8 Store and install apps from it in the first place.

The SkyDrive app lets you browse Microsoft SkyDrive files, and also allows other applications and load files from it, or save files to it. You can likewise install other storage providers, such as Dropbox and access that storage like a regular local drive.
