

a number of gestures that can be used to access many of its new and old features. Some of these are probably not very comfortable for mouse users though.

Here are some of the gestures you can perform in Windows 8, and their resulting actions:

ACTION	RESULT
Press and Hold	Context menu (right click)
Swipe from right edge	Charms bar
Swipe from left edge	List of open apps
Swipe from bottom	Command bar in modern apps
Swipe from top to right / left	Snap app to left or right of screen
Swipe from top to bottom	Close running app

Windows 8 also supports mouse gestures on for most of these new features, but they are a bit tricky at times.

To open the charms bar with the mouse, move it to the top-right or bottom-right corner; the charms bar icons will appear. At this point move your mouse straight down or up depending on where you started from, and the charms bar will show up.

To launch the start screen with the mouse, simply move it to the bottom left corner of the screen, a rectangle with Start written on it will appear, click on it. If you right click at this point, you will see a new menu that has links to a number of important tools.

Often Modern UI apps will have additional actions that can be brought up by swiping up from the bottom edge, to do this with the mouse, simply right click.

To switch the the most recently used Modern UI application, move the mouse to the top-left of the screen and click when a screenshot of that app appears.

You may have noticed that these gestures all rely on using screen edges, so what happens if you have multiple monitors? Which screen edge do you use?

If you have multiple screens, you can use any screen edge, and to make sure that you can actually move you mouse to the corner of a screen without shifting onto the next screen, Windows 8 puts up an invisible wall for your pointer in the screen corners. This makes it easy to use the corners for per-
